

Asysco strengthens team with four new employees

Coevorden, 28 April 2008 – Asysco, the specialist in mainframe migrations, has added four new employees to its team. This expansion focuses on Asysco's technical team, enabling the company to support its rapidly growing number of customers in their migration processes.

Edwin Kannekens – Tailor-made Software Engineer

Edwin Kannekens has been appointed Tailor-made Software Engineer. He will focus on developing custom-made software for customers on site. Besides that, he will implement all Asysco's tailor-made solutions for migrating Unisys mainframes to a Microsoft Windows environment. He will also manage systems and applications. Before joining Asysco, Kannekens was a developer at Yoonison, where he was involved in the development of cards for public transport and filling stations and the Internet-based applications associated with them. Kannekens built up experience with Asysco's LION migration technology at a previous employer, SHB.

Marino Mozes – Tailor-made Software Engineer

Marino Mozes has been appointed Tailor-made Software Engineer. Here he will be responsible for developing and maintaining tailor-made applications and functionality for customers. Marino graduated in Technical Computer Science at the College of Higher Education in Emmen before working as an account manager for the big computer retailer Dynabite.

Peter de Vrijer – Documentation Writer

Peter de Vrijer is strengthening Asysco as a documentation writer. As such, he will work on creating user training courses for organizations that use Asysco's migration technology. He will also write instructions for the user documentation and will be responsible for upgrading existing manuals and instruction materials. De Vrijer has a university degree in Electrical Engineering and worked for many years as a teacher of Electrical Engineering at the College of Higher Education in Windesheim. Subsequent to that, he worked for two years as education coordinator at ASTRON, the astronomical research and development organization.

Edwin Beek – Network Manager

Edwin Beek will be working as a network manager at Asysco. In this job, he will maintain the network, inventory and improve the network infrastructure and resolve any disruptions. He will also be responsible for purchasing ICT-related articles, license management of software packages and drawing up documentation for servers and the network infrastructure. Beek has already done similar work at NOWM Verzekeringen, Analytisch Biochemisch Laboratorium and Yacht ICT/IT.

‘More and more organizations want to migrate their mainframes to open, flexible systems,’ says Erik van Rikxoort, Chief Executive Officer of Asysco. ‘After all, the costs of hardware, software and maintenance for legacy systems are enormous. But it’s also a fact that mainframe personnel are getting more difficult to find. That’s why we carried out a rapidly growing number of orders for migrating mainframes to Windows environments last year. Strengthening our team is essential for this. So we are very happy with the arrival of Edwin, Marino, Peter and Edwin, and we expect to recruit even more new employees shortly.’
