

Marcel den Outer and Gert Assen join Asysco

Coevorden, 9 December 2008 – The Dutch company Asysco, the specialist in mainframe migrations, has recruited two new employees. Marcel den Outer will strengthen the Service Europe department as a technical consultant and Gert Assen is joining Tailormade Services as a software engineer.

Marcel den Outer - Technical Consultant

After studying electronics at technical college, Marcel den Outer built up 25 years' experience in the ICT sector. In the past, he worked as an application developer for Gouda Vuurvast and worked at Unisys as a customer service engineer for ten years. Before joining Asysco, he was a system developer and project leader at IFN Finance for more than fourteen years and it was there that Den Outer acquired his first experience of Asysco. As a project leader, he supervised the migration from a Unisys environment to an open environment, for which he used Asysco's migration technology (AMT) LION.

'At IFN Finance, I was able to see from practice how cost-effective it is to use AMT-LION to migrate fully automatically to an open platform. I've seen how, through this, an organization can benefit from the advantages of a mainframe, such as stability, without the associated high management and maintenance costs. Moreover, the company's flexibility increases dramatically. So the decision to go and work for Asysco was a quick one,' says Marcel den Outer.

Gert Assen – Software Engineer

After working on drilling rigs and as a graphic technician, Gert Assen went to work for Sogeti Nederland. Here he worked as a software engineer for a large number of banks, insurance companies and government organisations, for which he built and managed office applications.

'As a software engineer at Asysco, I focus on developing tailor-made software for customers. To do this, I identify the user's wishes and system requirements and

translate these into efficient solutions. I think it's great to create tailor-made solutions that are perfectly geared to the customer's day-to-day business,' says Gert Assen.
